vSOCBox™

vSOCBox SOAR for Firewall

Enhance Current Investments on Firewall to Next-Gen Firewall Security Protection

A Cloud-Native/On-Premise Firewall Remediation Service

Challenges -

Today's most demanding distributed networked environment needs to be effectively secured with the right systematic approach and by proactively managing the firewall. Firewalls are just like any other IT project which requires a healthy mix of people, process, and technology. It delivers an enterprise grade protection unmatched risk visibility, and all the flexibility you need to power today's most demanding distributed networks. Many organizations deploy a firewall and think that they are safe. But, organizations need to ensure efficacy by taking a systematic approach to proactively manage the firewall alerts.

Solution -

vSOCBox 's SOAR for Firewall, is an intelligence driven service to address threats enabling an improved security posture with a single view. The vSOCBox 's Firewall Assurance leverages SOAR and delivers features as-

- **Device Security Monitoring (DSM) -**
Instantly visualize your device security topology – in the cloud, on-premises, and everything in between.

- **Threat Detection & Response (TDR) (Internal & External) -**

It enables an operational team with continuous visibility to the attack surface, empowering them to eliminate attack vectors by taking automated response to repetitive threats.

- **Security Configuration Assessment (SCA)**
Perform configuration assessments quickly and comprehensively.

- **Automate IT Cyber Threat Response**

Any IPs, URLs, etc. based on the threat intelligence feeds and IT incident response can be automated without manual intervention, such as–

1. Block Blacklisted IP Addresses
2. Block Ransomware URLs
3. Block Malware Domains

vSOCBox 's SOAR for Firewall automates firewall IT Operations tasks across different firewall vendors and complex rule-sets. It readies your network by continuously eliminating threats and removing the possibility of human error.

Capabilities -

MONITOR. DETECT. AUTOMATE. MITIGATE

- **QUICKER TIME TO RESPOND -**
With Automated response to repetitive alerts (almost 60%)* a large amount of alerts are addressed immediately without manual intervention at off-times too.

- **ADVANCED PROTECTION -**
Gain instant visibility and defend against network threats to enhance protection.

- **OPERATIONAL SAVINGS ON L1 RESOURCES TIME -**
With automated response 80+ hours saved per firewall of L1 resources per month*

- **REDUCTION OF MANUAL ERRORS -**
With this service reduce the chances of manual errors with clear visibility on remediated alerts and alerts where automated action failed.

*These numbers may vary based on the environment & the type of alerts.
